🚀 MMT Clone (Group of 6)

🛠️ Prerequisites (Before You Start)

Please ensure the following are set up on your system:

1. Install VS Code

- Download and install **Visual Studio Code**
- This will be your main code editor

2. Install Required Technologies

Make sure you have:

- **Node.js** (required to run backend and install packages)
- **React (via Vite)** for frontend
- **Express.js** for backend APIs
- **MongoDB Atlas** (cloud database)

3. Setup GitHub Account

- Create a GitHub account
- You will use it to:
  - Upload your code
  - Share your project

🧠 First Rule

"You are not expected to know anything.
You are expected to figure things out using AI."

👥 Team Division

👨‍🎓 1. Frontend – Search Page (Student 1)

- Build homepage (From, To, Date)
- Handle input fields
- Trigger search API

Skill Turtle

👨‍🎓 2. Frontend – Flights Page (Student 2)

- Show list of flights
- Display:
  - Airline
  - Price
  - Time
- Add “Book” button

👨‍🎓 3. Frontend – Booking Page (Student 3)

- Passenger form
- Show selected flight
- Submit booking

👨‍🏭 4. Backend – Auth (Student 4)

- Signup API
- Login API

👨‍🏭 5. Backend – Flights API (Student 5)

- API to return flights
- Filter by:
  - From
  - To
  - Date

👨‍🏭 6. Backend – Booking API (Student 6)

- Store booking data
- Connect user + flight

🧩 STEP-BY-STEP EXECUTION (VERY DETAILED)

🔥 STEP 1: Setup (ALL DO TOGETHER)

👉 Prompt:

Skill Turtle

"Explain how to create a React app using Vite and Node.js backend step by step for beginners"

Outcome:

- React app running
- Node server running

🎨 STEP 2: Frontend (Parallel Work)

🟢 Student 1: Search Page

👉 Prompt:

"Create a React form with inputs: from, to, date and a search button. Use useState and basic CSS"

Tasks:

- Create inputs
- Store values in state
- On button click → console.log data

🟢 Student 2: Flights Page

👉 Prompt:

"Create a React component to display flight cards with airline name, price and time using dummy data"

Tasks:

- Show list using `.map()`
- Add "Book" button

🟢 Student 3: Booking Page

👉 Prompt:

"Create a simple React form to collect passenger name, age and show selected flight details"

Skill Turtle

Tasks:

- Input fields
- Submit button

⚙️ STEP 3: Backend (Parallel Work)

🟢 Student 4: Auth APIs

👉 Prompt:

"Create signup and login APIs in Node.js Express with MongoDB step by step for beginners"

Tasks:

- POST /signup
- POST /login
- Save user in DB

🟢 Student 5: Flight API

👉 Prompt:

"Create an API in Express that returns list of flights with filtering by source, destination and date"

Tasks:

- GET /flights
- Return dummy or DB data

🟢 Student 6: Booking API

👉 Prompt:

"Create an API to store booking details with userId, flightId and passenger details"

Tasks:

- POST /booking
- Save in DB

Skill Turtle

🗄️ STEP 4: Database (Simple Understanding)

👉 Prompt:

> "Explain MongoDB schema for user, flight and booking in simple terms"
>
> **Minimum needed:**

- User collection
- Flight collection
- Booking collection

Skill Turtle

🔗 STEP 5: CONNECT EVERYTHING (MOST IMPORTANT)

🔥 Student 1 + 5 (Search + API)

- Call flight API from search page

👉 Prompt:

> "How to call backend API in React using axios"

🔥 Student 2 + 5 (Flights display)

- Show real data instead of dummy

🔥 Student 3 + 6 (Booking)

- Send booking data to backend

🚀 STEP 6: FINAL INTEGRATION

- Login → Search → Flights → Book → Done

👉 Even if UI is bad → it's fine

⚠️ COMMON BLOCKERS

❌ "Nothing is working"

👉 Normal

❌ "Errors are coming"

👉 Good sign

❌ "I don't understand"

👉 Expected

🧠 HOW TO USE AI (REAL WAY)

❌ Don't:

"Build full project"

✅ Do:

"Build search form"
"Fix this error"
"Explain this code"

🔁 DEBUGGING FLOW (VERY IMPORTANT)

When stuck:

Skill Turtle

1. Copy error
2. Paste in AI
3. Ask:

   "Explain error and fix it step by step"

🏁 FINAL DELIVERABLE

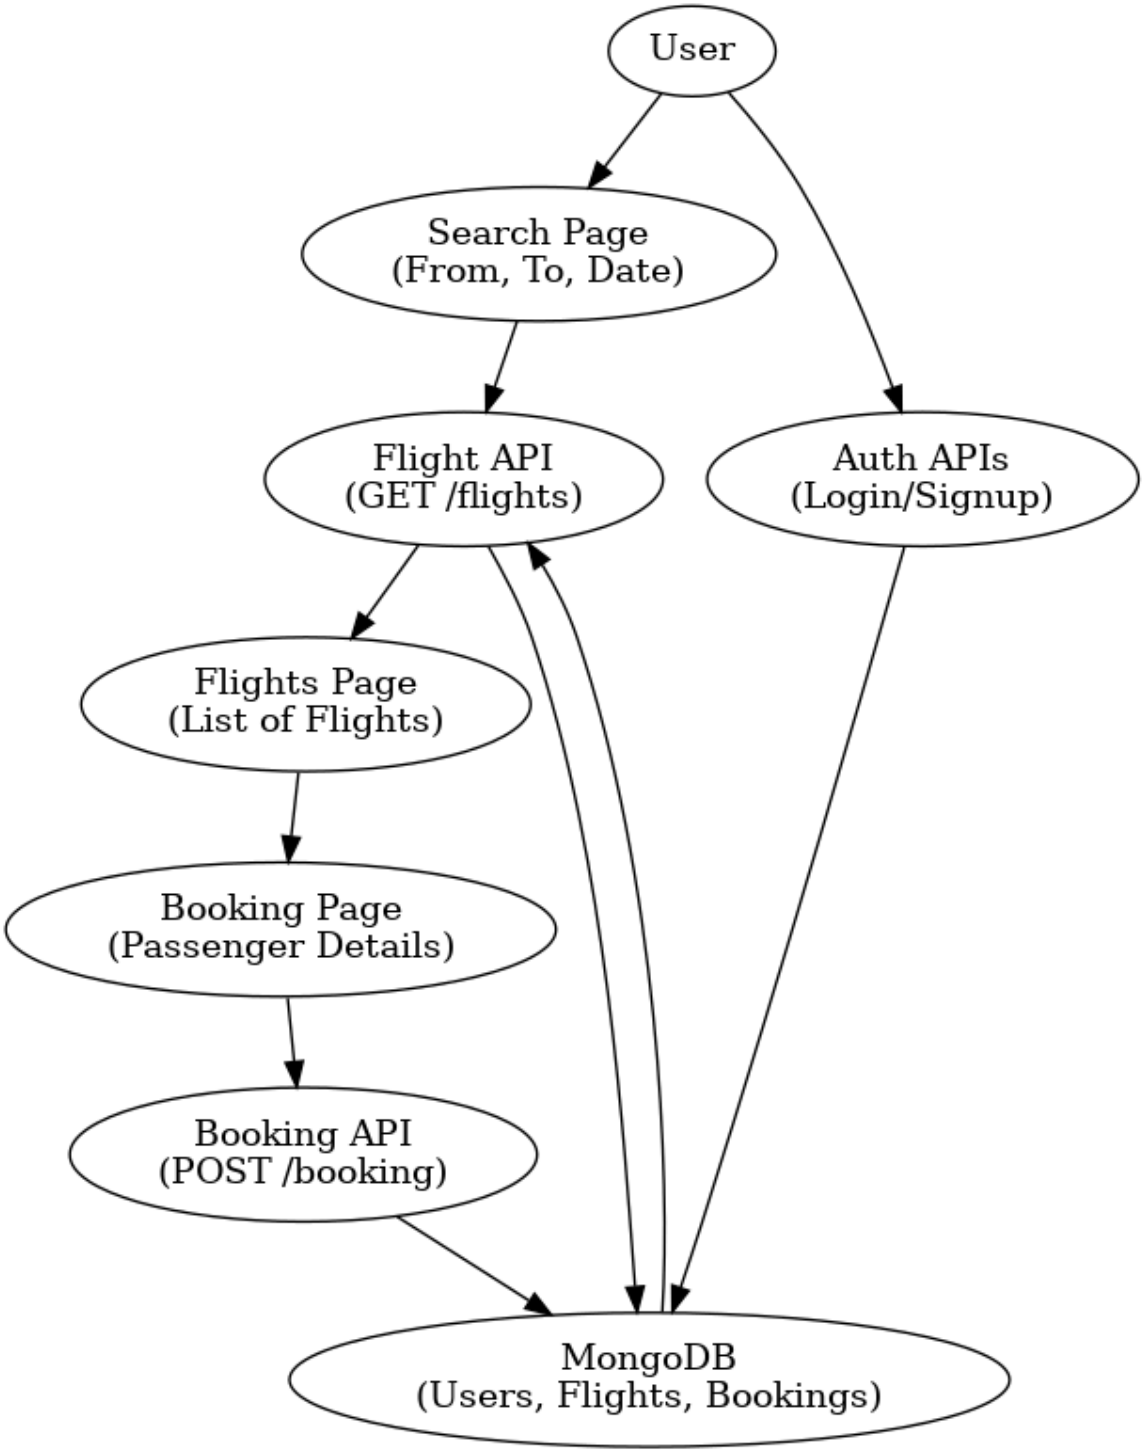
Each team must show:

- Working app (even basic)
- Explain their part
- Show prompts they used

🔥 MENTAL MODEL (MOST IMPORTANT)

"You are not coding.
You are solving problems using AI."

Skill Turtle



User
Search Page
(From, To, Date)
Flight API
(GET /flights)
Auth APIs
(Login/Signup)
Flights Page
(List of Flights)
Booking Page
(Passenger Details)
Booking API
(POST /booking)
MongoDB
(Users, Flights, Bookings)
